## Job Market Paper

**Political Implications of Trade Liberalization: Evidence from India** (with Sebastian Järvvall and Roza Khoban)

In recent decades, many developing countries have integrated into the global economy through trade reforms. However, the gains from trade liberalization have been unevenly distributed among different economic and social groups. This paper examines how adverse economic shocks induced by trade liberalization influence voting behavior and political representation among marginalized groups in India. Using exogenous variation in regional exposure to tariff reductions from India's 1990s trade liberalization and constructing a novel dataset linking politicians to social communities, we examine the economic and political effects of trade liberalization in India. Our findings reveal that trade liberalization led to a relative decline in consumption and earnings for workers from marginalized groups. In response, these groups increased their political engagement, resulting in higher vote shares and representation for politicians from marginalized groups, with a counteracting decline among non-marginalized group politicians. We show that these political effects are most pronounced in districts with a significant population share of marginalized groups, suggesting that economic grievances fueled the political backlash. Furthermore, we provide evidence that redistributive public policy mitigated these political changes, supporting the economic grievances hypothesis.

## Working Papers

**Harnessing Satellite Data to Improve Social Assistance Targeting in the Eastern Caribbean** (with Sophia Chen, Flavien Moreau, and Joana Pereira)

Prioritizing populations most in need of social assistance is an important policy decision. In the Eastern Caribbean, social assistance targeting is constrained by limited data and the need for rapid support in times of large economic and natural disaster shocks. We leverage recent advances in machine learning and satellite imagery processing to propose an implementable strategy in the face of these constraints. We show that local well-being can be predicted with high accuracy in the Eastern Caribbean region using satellite data and that such predictions can be used to improve targeting by reducing aggregation bias, better allocating resources across areas, and proxying for information difficult to verify.

**Political (Mis)selection: The Role of Historical Institutions** (with Shubhro Bhattacharya and Utsav Manjeer)

Is there a persistent impact of historical institutions on the selection of “bad” politicians? In this paper, we document the nuanced consequences of history on modern adverse political selection using variations in colonial land tenure systems during British rule in India. Politicians with criminal charges are significantly more likely to run for office, and win elections, in areas where extractive landlords historically held substantial property rights. Corrupt politicians who experience disproportionately large private financial gains in office, however, are significantly more likely to be in areas where individual cultivators historically held property rights. Our analysis establishes that these estimates are not biased by endogeneity concerns. Rather, a plausible mechanism indicates a comparative advantage for criminal politicians in the conflictual electoral environment of landlord areas. The relatively less competitive elections in non-landlord areas, instead, are susceptible to elite capture and subsequent wealth accumulation via corporate connections by politicians.

## Publications

**Development Research at High Geographic Resolution: An Analysis of Night Lights, Firms, and Poverty in India Using the SHRUG Open Data Platform** (with Sam Asher, Toby Lunt, and Paul Novosad), *World Bank Economic Review* (2021)

**Shifted Baselines Reduce Willingness to Pay for Conservation** (with Loren McClenachan, Shah Payal, and Sahan Dissanayake), *Frontiers in Marine Science* (2018)

## Work in Progress

**Market Integration and Cost of Borders in Africa** (with Robin Burgess, Ameet Morjaria, and Gerard Padró i Miquel)

**Weather Shocks and Production Outcomes of Firms in Uganda** (with Anton Reinicke and Yasuka Tateishi)
